

SSW345 Bot Project—Storyboard—Team 6

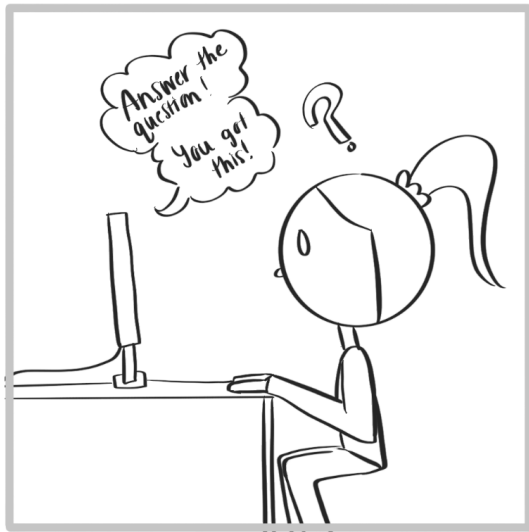

In COVID-19, students across the world are forced to learn from home. The transition was very sudden and made learning difficult.

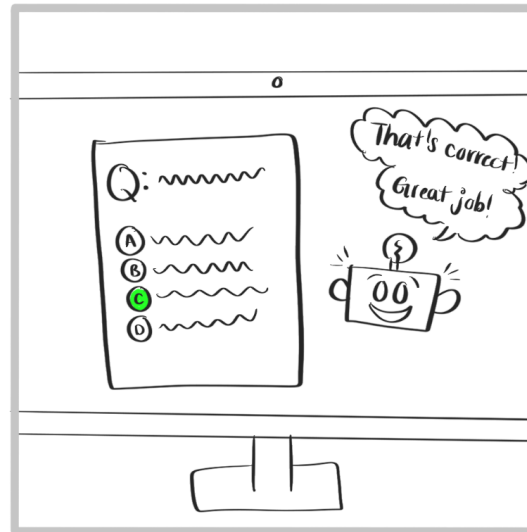

Online learning has negative effects for both students and parents. While parents are trying to juggle work, chores, and teaching their kids, kids are become more isolated and depressed.

Our solution is to create a bot that encourages the student to participate and focus when learning remotely. The bot would be interactive and fun for students.

When a teacher creates a question for the students to answer, the bot will encourage the student to answer it.

If the student answers the question correctly, the bot will congratulate the student by triggering celebration emojis on the screen. If not, the bot will provide hints until the correct answer is chosen.

The bot will have many other features that will help students have fun learning from home.
